

Take action to protect migratory birds:

- begin a systematic review of communication tower and bird mortality issues.
- institute a research program, funded by the communication industry, to identify tower placement, design and lighting conditions that result in bird mortality.
- undertake environmental reviews of all existing towers to assess their placement and design with regard to migratory bird impact.
- Require that all proposed towers be subjected to rigorous environmental reviews.
- implement immediate protections based on existing knowledge, such as the voluntary tower siting and placement guidelines developed by the US Fish and Wildlife Service.
